

FERRO

DOORS A/S

ferro-doors.dk

Unique automatic door systems for
bus, train and construction industries

Well - known product in continuous development

FERRO DOORS was established in 1947. So we have time on our side when we offer our clients more than 50 years of experience and specialisation in automatic door systems for bus and train manufacturers.

We continuously develop our products in a close collaboration with our clients, which means that our products are always state-of-the-art. With our clients as sparring partners, we try out new ideas and solutions in our own highly specialised test centre.

Customer advantages at FERRO DOORS

- Professional project management
- Customized products
- Full documentation
- Delivery on time

Our solutions are characterised by high quality, long service life, low maintenance costs and consistent design. When a new door system is planned, our customers can benefit by bringing FERRO onboard at an early stage.

FERRO's expertise and innovative skills make sure that product development runs effectively and our highly-qualified development department are keen to start close dialogue with our customers so that they can act as technical sparring partners and ideas men, thus contributing to the effectiveness of the development stage.

Ideas and solution models are tested at our own test centre. The experiences and results from these tests are carefully recorded, helping us to optimise our products and solutions at all times. This store of knowledge benefits our customers in the form of continuously improved product quality.

Our state-of-the-art production equipment ensures top-quality products at attractive prices. FERRO produces the majority of components for the door solutions itself, which are thoroughly tested and supplied with full documentation.

Production is based on a high level of flexibility and we operate just-in-time delivery to our customers' assembly lines according to the individually agreed flow.

FERRO DOORS are known for

- Flexible and modern design
- User-friendly mounting
- Well-proven components
- Low lifetime cost

Delivery on time

One of the most important elements of FERRO's professional vision is punctual delivery. We ensure this partly through close cooperation with our clients to involve FERRO in the development process of new door systems as early as possible. FERRO's systems are made in Denmark, which allows us to keep a tight rein on the production process and deliver our product on time.

After sales

FERRO can offer customers spare part sales for many years after delivery date for some products. We recognize that because our products have a long lifetime, heavy demands will be made of stocks and documentation management.

We have extensive refurbishment projects, especially for automatic doors on trains. Our experienced personnel know the complexity of the product and work with great care and professionalism, ensuring effective and correct product refurbishment.
